CleanTech Biofuels Enters Agreement with Terra Vista Systems to Develop Additional Revenue Streams through Carbon Credit Protocols

Tuesday June 24, 4:46 pm ET

ST. LOUIS, June 24 /PRNewswire-FirstCall/ -- CleanTech Biofuels, Inc. (OTC Bulletin Board: [CLTH](#) - [News](#)) is pleased to announce the signing of an agreement with Terra Vista Systems to develop and implement Carbon Sequestration Protocols for CleanTech's unique waste-to-ethanol processes and manage CleanTech's Carbon Credits program.

CleanTech Biofuels' novel waste-to-energy cellulosic ethanol technology systems utilize waste otherwise filling landfills to produce renewable sources of ethanol fuel locally. The Carbon Credits Protocols being integrated by Terra Vista Systems into CleanTech's systems will quantify and capitalize on Cleantech's added benefit of mitigating methane and other dangerous greenhouse gases emissions from release into the atmosphere through traditional disposal of waste in landfills.

Ed Hennessey, CEO of CleanTech BioFuels, Inc. stated: "We are pleased to be partnering with Terra Vista Systems to help ensure successful implementation of our CO2 sequestration strategies which should further our competitive advantage and tap into additional revenue streams in the developing carbon markets."

About CleanTech Biofuels, Inc.

CleanTech Biofuels, Inc. is a development stage company with technology capable of converting municipal solid waste into ethanol. By using the existing infrastructure for municipal solid waste collection and disposal to collect biomass at negative feedstock cost, the Company expects to achieve profitability quickly relative to other ethanol producers who must develop their infrastructure to collect and transport more expensive feedstocks such as sugar cane, corn or even switchgrass, wood waste, or corn stover.
